### Bruksområde

Fiber optical cable for the oil- and offshore industry, commercial marine vessels and other harsh environments.

The cable has excellent communication properties and is tested to be operative in least 180 min. at 1,000°C which means that it can maintain vital communication in case of a fire situation. The fibers are protected in jelly filled loose tubes stranded around a central strength member to ensure optimum performance and long life.

Each fiber and loose tube are colour coded for easy identification during splicing and termination. MUD resistant jacket.
